

Stormwater Sampling Documentation
Quarterly Visual Examination of Storm Water Quality

Permit Part II D

Facility Name:	Allied Concrete - Staunton
Permit Number:	VAG110071
Outfall Number:	001
Sample Location:	Outfall 001

Year:	2020
-------	------

Note: A Measurable Storm Event is an storm event that results in an actual discharge from the site. It must be at least 72 hours from the last Measurable Storm Event for monitoring. Within 30 minutes (and no later than 60 minutes) from when the discharge begins, collect a representative sample of the stormwater discharge directly into a clean glass container and observe the water's characteristics in a well lit area.

Information and Data		Indicate the Quarter Below	
Date of storm event sampled.	12/14/2020	1st Quarter (Jan-Mar)	
Duration (in hours) of storm event sampled.	10	2nd Quarter (Apr-Jun)	
Rainfall total (in inches) of the storm event that generated the sampled runoff.	1.23	3rd Quarter (Jul-Sep)	
Duration between the storm event sampled and the end of the previous measurable storm event.	214	4th Quarter (Oct-Dec)	X
Time of Visual Examination	6:00 AM		
Name and Signature of person conducting Examination	Pete Hawes		
Nature of Discharge (Rain runoff, Snow melt, or "None During Quarter")	rain runoff		
Visual Quality Observations:			
1. Describe the Clarity and Color of the discharge: Clear, Slight Brown (or Gray), Light Brown (or Gray), Turbid Brown (or Gray), Muddy Brown (or Gray), etc.	light gray/tan		
2. Describe any odor present: None, earthy, musty, petroleum, chemical-like, etc.	none		
3. Are there any floating solids present? If so describe: plastic or paper trash, wood chips, grass, etc.	none		
4. Are there any settled solids present after 30 minutes settling time? If so describe: 5%, 10%, 25%, 50% of sampling container full of solids.	trace		
5. Is there any foam present at the discharge outfall? If so describe color and extent of coverage.	none		
6. Is there an oil sheen ('rainbow' hue) present?	none		
7. Are there any other indicators of Storm Water pollution?	none		
8. Visual quality of the receiving stream (include observations for any solids deposition or oil sheen from industrial activity)?	no solids; no sheen		
heavy rain water entering outfall from offsite above plant - gray/tan
